

The MaCalaster Project

Dr. Sydney Hamilton, world-renowned geneticist and OB/Gyn, has discovered a method for successfully cloning baboons and using their organs for human transplants. With the support of the Jennings Institute, the largest biotech company in the world, Hamilton successfully alters the genetics of the cloned baboons DNA to produce perfect donor organs-specifically matched to their human recipients. This program of providing rejection free transplant organs is a huge success until Sydney uncovers a terrible secret. Suddenly women are dying, their bodies horribly mutilated, and Sydney is being framed as the murderer. Now on the run, he must find the evidence to clear his name and to stop one of the worst atrocities humankind has ever known.
