

Basic Studies in Environmental Knowledge, Technology, Evaluation, and Strategy: Introduction to East Asia Environmental Studies

This book covers diverse environmental issues such as climate change; biodiversity preservation; prevention of air, water, and soil pollution; and resource recycling. Readers can acquire these four practical interdisciplinary abilities: 1. knowledge; 2. technology; 3. evaluation; and 4. strategy in the diverse issues related to the environment. These abilities are fundamental to identifying the core essence of economic and ecological interdependence, to look at and analyze problems from an overarching perspective, and to consider countermeasures to be taken. Each chapter of this book corresponds to a lecture in the East Asia Environmental Strategist Training Program at Kyushu University and is excellent reading as a sourcebook.
