

Parametric Statistical Models and Likelihood (Lecture Notes in Statistics)

This book is a slightly revised and expanded version of a set III of notes used for a lecture series given at the Ecole d'Ete de Probabilites at st. Flour in August 1986. In view of the statistical nature of the material discussed herein it was agreed to publish the material as a separate volume in the statistics series rather than, as is the tradition, in a joint volume in the Lecture Notes in Mathematics Series. It is a genuine pleasure to have this opportunity to thank III the organizers of Les Ecoles d'Ete, and in particular Professor P. -L. Hennequin, for the excellent arrangements of these Summer Schools which form a very significant forum for the exchange of scientific ideas relating to probability. The efficient, careful and patient preparation of the typescript by Oddbj~rg Wethelund is also gratefully acknowledged. Aarhus, June 1988 O. E. Barndorff-Nielsen

Parametric statistical Models and Likelihood
