

Conversation Analysis: Studies from the first generation (Pragmatics & Beyond New Series)

This collection assembles early, yet previously unpublished research into the practices that organize conversational interaction by many of the central figures in the development and advancement of Conversation Analysis as a discipline. Using the methods of sequential analysis as first developed by Harvey Sacks, the authors produce detailed empirical accounts of talk in interaction that make fundamental contributions to our understanding of turntaking, action formation and sequence organization. One distinguishing feature of this collection is that each of the contributors worked directly with Sacks as a collaborator or was trained by him at the University of California or both. Taken together this collection gives readers a taste of CA inquiry in its early years, while nevertheless presenting research of contemporary significance by internationally known conversation analysts.
