

Variation and Reconstruction (Current Issues in Linguistic Theory)

The relation of language variation to reconstructed languages and to the methodology of reconstruction has long been neglected. The articles in the present volume consider this relationship from a number of different angles, with a number of different focuses. Several of the papers discuss evidence from Germanic, either Proto-Germanic (Joseph, Schwink), or daughter languages such as Dutch (Goss & Howell), Afrikaans (Roberge), Newcastle English (Milroy), and a Wisconsin German dialect (Geiger & Salmons). Other papers look at Italian (Cravens), Spanish (Harris-Northall), and the non-Indo-European languages or families Aramaic (Miller), and Proto-Hmong-Mien (Ratliff), and the Southeast Asian languages Phan Rang Cham and Tsat (Thurgood). In doing so they bring together a number of interconnected issues which are of current concern in comparative and historical linguistics.
