

Industrial Dynamics and the Evolution of Markets in the Mutual Fund Industry

The asset management, and more specifically the mutual fund industry, is facing major strategic challenges. Although the market is growing overall, its growth attracts a steady stream of new entrants and new products that jeopardize the position and profitability of (large) incumbent firms. In order to cope with this setting, Andreas Mattig focuses on a holistic market model to sketch the mutual fund industry structure. This allows to propose a new measurement approach and to track the industrial dynamics. Based on these theoretical contributions, he concentrates on governance aspects and moulds the results into a practice-oriented strategic framework.
