

Service Orientation in Holonic and Multi-Agent Manufacturing and Robotics (Studies in Computational Intelligence)

This volume gathers the peer reviewed papers which were presented at the third edition of the International Workshop Service Orientation in Holonic and Multi-agent Manufacturing and Robotics SOHOMA13 organized on June 20-22, 2013 by the Centre of Research in Computer Integrated Manufacturing and Robotics CIMR Bucharest, and hosted by the University of Valenciennes, France. The book is structured in five parts, each one covering a specific research domain which represents a trend for modern manufacturing control: Distributed Intelligence for Sustainable Manufacturing, Holonic and Multi-Agent Technologies for Manufacturing Planning and Control; Service Orientation in Manufacturing Management and Control, Intelligent Products and Product-driven Automation and Robotics for Manufacturing and Services. These five evolution lines have in common concepts related to service orientation in a distributed planning and control agent-based industrial environment; today it is generally recognized that the Service Oriented Enterprise Architecture paradigm has been looked upon as a suitable and effective approach for industrial automation and management of manufacturing enterprises.
