

# Studies of Nanoconstrictions, Nanowires and Fe<sub>3</sub>O<sub>4</sub> Thin Films: Electrical Conduction and Magnetic Properties. Fabrication by Focused Electron/Ion Beam (Springer Theses)

This work constitutes a detailed study of electrical and magnetic properties in nanometric materials with a range of scales: atomic-sized nanoconstrictions, micro- and nanowires and thin films. Firstly, a novel method of fabricating atomic-sized constrictions in metals is presented; it relies on measuring the conduction of the device while a focused-ion-beam etching process is in progress.
