

## Ethics in Applied Linguistics Research: Language Researcher Narratives (Second Language Acquisition Research Series)

Ethics in Applied Linguistics Research explores how ethical issues are negotiated in different areas of language research, illustrating for graduate students in applied linguistics the ethical dilemmas they might encounter in the research methodology classroom and how they might be addressed. This volume serves to demystify the complex ethical decision-making process by its accounts of renowned researchers ethical practices as they transpired on the ground and how they negotiated externally imposed research codes. The collection investigates and records the research practices of prominent international applied linguists from a wide variety of subdisciplines, including discourse analysis, educational linguistics, heritage and minority education, language planning and policy, language and technology, literacy, second language acquisition, second and foreign language pedagogy, and sociolinguistics. By problematizing research practices that draw on a range of methodologies, Ethics in Applied Linguistics Research puts front and center the urgency to prepare the next generation of applied linguists with the tools and knowledge necessary to conduct ethical research in an increasingly globalized and networked world.
