

Managing Risk: Risk Perception

This research examines the way employees perceive risk in a non-governmental healthcare organisation that provides care and support for people with mental, intellectual and physical disabilities. The research demonstrates that the perceptual aspect of risk emphasises the central role of people in any risk management process. For effective risk management, all perspectives should be considered. This requires a participatory system of managing risk, improving the awareness of people about risk, and modifying the culture of risk among them.
