

## Dimensions of Possession (Typological Studies in Language)

Few linguistic concepts are more elusive than possession. The present collection of articles, selected from an international workshop held in Copenhagen in May 1998, confronts the subject from several angles (lexicon; the semantics of possession and the verb HAVE; the syntax of genitives and other possessive structures; the interaction of verbal and nominal constructions; the semantic and textual implications of the alienable/inalienable distinction, etc.) and approaches (formal semantics; functional semantics; and syntax as diachronic and typological comparisons). The languages covered include both European languages such as Danish, French, Russian, Spanish, Portuguese and Latin, and several American, Australian, African and Asian languages. This volume in which the contributing scholars have sought to examine as many dimensions as possible is of interest to all linguists, in particular those working in the field of typology and functional approaches to language.
